

Vehicle Management Platform

The connectivity solution for cloud-based services

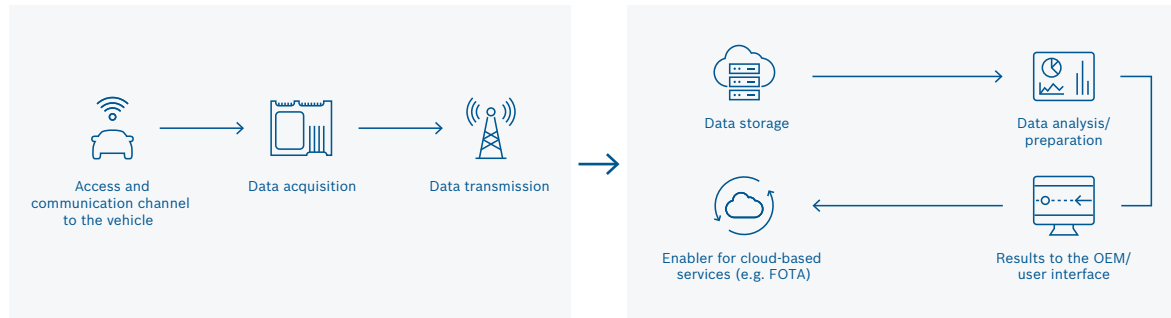

Connected mobility

One consistent solution for the entire vehicle life cycle

Basic software module

Data management module

efficient

thanks to a consistent connectivity solution throughout the entire vehicle life cycle

flexible

because of software modules tailored to the customer independent of the hardware used

economical

thanks to faster market maturity and reduced effort for validation and field data/vehicle management

- ▶ The Vehicle Management Platform enables vehicle connectivity and cloud-based services from development to volume production.
- ▶ The software and infrastructure platform thus provides secure access to vehicle data from anywhere, and enables remote firmware updates.
- ▶ This makes the Vehicle Management Platform an enabler for cloud-based services such as FOTA, Predictive Diagnostics and fleet management.
- ▶ It can be used for all vehicle segments, including passenger cars, commercial vehicles, off-highway vehicles and two-wheelers.
